

Air Capabilities

MAI has many air capabilities that you may not be aware of. We have the capability to analyze sorbent tubes and air filter cassettes for a variety of air contaminants. MAI has routine sampling media readily available at no additional cost to our clients, sampling pumps are available for rental. The following are the current methods that we are able to provide:

- NIOSH 1403 Alcohols
- NIOSH 2007 Aminoethanol
- NIOSH 2016 Formaldehyde
- NIOSH 2532 Glutaraldehyde
- NIOSH 5506 PNAs by HPLC
- NIOSH 2546 Phenols & Cresols
- NIOSH 5503 PCBs
- NIOSH 5600 OrganoPhosphorous Pesticides
- NIOSH 1550 Diesel
- NIOSH 500 Total Particulates
- NIOSH 600 Respirable Particulates
- NIOSH 7303 Metals
- NIOSH 6009 Mercury

Important to Note:

- There are numerous types of sorbent materials available, each customized to best capture a particular chemical or class of chemicals. No one sorbent material will collect all types of air contaminants.
- The sample volume must be listed on the chain of custody form. If you do not have the volume then please list time on, time off, and flow rate on the chain of custody or separate attachment.

If there are any particular methods that you are interested in that are not listed, please inquire about method set-up. New methods are frequently set-up at the request of our clients.

We want to hear from you! Please send your comments and feedback to:
